

ABSTRACT

A metal-coated resin molded article is provided, which has improved adhesion between a metal layer and a substrate of a resin composition as well as excellent moldability, heat resistance, electronic and mechanical properties. The resin composition comprises a liquid-crystalline polyester and an epoxy-group containing ethylene copolymer. The ethylene copolymer contains 50 to 99.9 wt% of an ethylene unit and 0.1 to 30 wt% of at least one of an unsaturated carboxylic acid glycidyl ester unit and an unsaturated glycidyl ether unit in the molecule thereof. A content of the ethylene copolymer is in a range of 0.1 to 25 parts by weight with respect to 100 parts by weight of the liquid-crystalline polyester.
